**1: COS Cells**

Links

CELL LINES derived from the CV-1 cell line by transformation with a replication origin defective mutant of SV40 VIRUS, which codes for wild type large T antigen (ANTIGENS, POLYOMAVIRUS TRANSFORMING). They are used for transfection and cloning. (The CV-1 cell line was derived from the kidney of an adult male African green monkey (CERCOPITHECUS AETHIOPS).)

Year introduced: 1997

Subheadings: This list includes those paired at least once with this heading in MEDLINE and may not reflect current rules for allowable combinations.

**1: HeLa Cells**

Links

The first continuously cultured human malignant CELL LINE, derived from the cervical carcinoma of Henrietta Lacks (one of several pseudonyms). These cells are used for VIRUS CULTIVATION and antitumor drug screening assays.

Year introduced: 1968(1965)
